- github.com/sarfrazahmed181-commits

## SKILLS

### Languages

TypeScript, JavaScript (ES6+)

### Frontend

React.js, Context API, React Query, React Router, Tailwind CSS, HTML5, CSS3, Vite

### Backend & APIs

Node.js, Express.js, REST APIs, JWT, RBAC

### Testing & Quality

Unit & integration tests, code review, reviewed commits

### Database

PostgreSQL, Prisma, MongoDB

### Tools

Git, SVN, Docker

## STRENGTHS

- Problem Solving
- Teamwork
- Communication
- Quick Learner

## PROFILE

Frontend-focused full-stack developer specializing in **TypeScript** and **React**. I build production web applications with clean, maintainable, well-tested code — reusable component architecture, state management, and REST API integration — with a strong focus on performance and reliability. Comfortable across the stack (Node.js, PostgreSQL) and in distributed, remote teams, shipping reviewed, well-documented changes in an AI-augmented workflow.

## EXPERIENCE

### React Developer — niXaam LLC

Apr 2026 – Present

Multi-tenant healthcare SaaS — EHR platform, patient management system, and clinic operations across doctor, patient, admin, branch and staff portals.

- Built **role-based portals** (doctor / patient / admin / branch / staff) in React + TypeScript with server-side RBAC.
- Designed a **WYSIWYG PDF report template engine** per branch (Puppeteer + pdfme) — multi-page pagination, headers/footers, watermarks and signatures.
- Delivered global-username + role-scoped-email **authentication** (PostgreSQL triggers, advisory locks) with flexible login by username or email.
- Cut clinical PDF generation from **~30s to ~1s**; unified Home Rest, Consent and Referral documents onto a single PDF service.
- Paired daily with **Claude Code** (Anthropic) — feature scoping, refactors, migrations and code review — shipping reviewed commits.

### Self-Taught Full-Stack Development — Independent

2022 – 2025

Career transition into software engineering — self-trained in modern web development while building hands-on projects.

- Self-built practice apps in **React & Node.js** — JWT authentication, REST API integration and CRUD — to solidify full-stack fundamentals before entering the industry.

## PROJECTS

### ECW — eClinicalWorks Integration Python · Node.js · PostgreSQL · Docker

Production-hardened Python bot ingesting patient, encounter and insurance data from eClinicalWorks into a multi-tenant Postgres store — per-clinic credentials, cron scheduling, resumable runs, retry with backoff and failure alerting.

### PMS — Patient Management System React · TypeScript · Node.js · Prisma · PostgreSQL

Homeopathy clinic system: patient registration, prescription workflow, medicine ↔ disease mapping, PDF/print prescriptions, ShipRocket shipment integration and follow-up reminders — with role-based access and reporting.

### XEHR — Electronic Health Records Platform React · TS · Node · Express · PostgreSQL ·

Puppeteer

Full EHR: multi-role portals (Doctor, Patient, Admin, Branch, Staff, Frontdesk), a telehealth console with AI-assisted drafts, a unified PDF template engine, envelope-encrypted records, MFA and audit logging.

## EDUCATION

### BS Computer Science

2018

Sir Syed University of Engineering & Technology, Karachi

## CERTIFICATIONS

### Development Training Program — Wayz Consulting

2022

Certificate of Achievement — successful completion of an intensive, hands-on software development training program.
